## TRIPOLAR FUZZY GRAPHS

## Jon Arockiaraj J and Obed Issac $\mathbf{N}$

PG \& Research Department of Mathematics, St. Joseph' s College of Arts and Science<br>(Autonomous), Cuddalore, Tamil Nadu, India

#### Abstract

In this Paper, we introduce the idea of Tripolar fuzzy graph, expand various method of the signification, dispute the concept of isomorphisms of these graphs and investigate some of their important properties. We then introduce the notation of strong Tripolar fuzzy graph and study some properties. We also discuss some propositions on self complementary and strong Tripolar fuzzy graph.

## Keywords:

Tripolar fuzzy graph, Strong Tripolar fuzzy graph, Self complementary, morphisms.

## 1. Introduction

In 1975, Rosenfeld [46] introduced the concept of fuzzy graphs. The fuzzy relations between fuzzy sets were also considered by Rosenfeld and he developed the structure of fuzzy graphs. The complement of a fuzzy graph was defined by Mordeson and Nair [35] and further studied by Sunitha and Vijayakumar [48].In 1965, Zadeh [52] introduced the notion of a fuzzy subset of a set as a method for representing uncertainty. In 1994, Zhang [57,58] initiated the concept of bipolar fuzzy sets as a generalization of fuzzy sets. Bipolar fuzzy sets are an extension of fuzzy sets whose membership degree range is [$1,1]$. In a bipolar fuzzy set, the membership degree 0 of an element means that the element is irrelevant to the corresponding property, the membership degree $(0,1]$ of an element indicates that the element somewhat satisfies the property, and the membership degree $[1,0)$ of an element indicates that the element somewhat satisfies the implicit counter-property. Although bipolar fuzzy sets and intuitionistic fuzzy sets look similar to each other, they are essentially different sets [28]. In many domains, it is important to be able to deal with bipolar information. It is noted that positive information represents what is granted to be possible, while negative information represents what is considered to be impossible. This domain has recently motivated new research in several directions. The complement of a fuzzy graph was defined by Mordeson and Nair [35] and further studied by Sunitha and Vijayakumar [48]. Bhutani and Rosenfeld introduced the concept of M-strong fuzzy graphs in [10] and studied some of their properties. The concept of strong arcs in fuzzy graphs was discussed in [12]. Recently, Akram [2] has introduced the notion of cofuzzy graphs and investigated several of their properties. Shannon and Atanassov [48] introduced the concept of intuitionistic fuzzy relations and intuitionistic fuzzy graphs, and investigated some of their properties in [49].

In this paper, Mr.J.Jon Arockiaraj and N.ObedIssac introduce the notion of TPFG describe various methods of their construction, discuss the concept of isomorphism of these
graphs, and investigate some of their important properties. We then introduce the notion of strong TPFG and study some of their properties.

## 2. Preliminaries

Definition 2.1. A graph is an ordered pair $G^{*}=(V, E)$, where $V$ is the set of vertices of $G^{*}$ and $E$ is the set of edges of $G^{*}$ Two vertices $x$ and $y$ in an undirected graphG*are said to be adjacent in $G^{*}$ if $\{x, y\}$ is an edge of $G^{*}$. A simple graph is an undirected graph that has no loops and no more than one edge between any two different vertices.

Definition 2.2: Consider the Cartesian product $\mathrm{G}^{*}=\mathrm{G}_{1}{ }^{*} \times \mathrm{G}_{2}{ }^{*}=$ $(\mathrm{V}, \mathrm{E})$ of graphs $\mathrm{G}_{1}{ }^{*}$ and $\mathrm{G}_{2}{ }^{*}$. Then $\mathrm{V}=\mathrm{V}_{1} \times \mathrm{V}_{2}$ and $\mathrm{E}=$ $\left\{\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right) \mid \mathrm{x}_{1} \boldsymbol{\epsilon} \mathrm{~V}_{1}, \mathrm{x}_{2} \mathrm{y}_{2} \boldsymbol{\epsilon} \mathrm{E}_{2}\right\} \square\left\{\left(\mathrm{x}_{1}, \mathrm{z}\right)\left(\mathrm{y}_{1}, \mathrm{z}\right) \mid \boldsymbol{\epsilon} \mathrm{V}_{2}, \mathrm{x}_{1} \mathrm{y}_{1} \in \mathrm{E}_{1}\right\}$.

Definition 2.3: Let $G_{1}{ }^{*}=\left(V_{1}, E_{1}\right)$ and $G_{2}=\left(V_{2}, E_{2}\right)$ be two simple graphs. Then, the composition of graph $\mathrm{G}_{1}{ }^{*}$ with $\mathrm{G}_{2}{ }^{*}$ is denoted by $\mathrm{G}_{1}{ }^{*}\left[\mathrm{G}_{2}{ }^{*}\right]=\left(\mathrm{V}_{1} \times \mathrm{V}_{2}, \mathrm{E}^{0}\right)$, where $\mathrm{E}^{0}=\mathrm{E} \cup\left\{\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\right.$ $\left.\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right) \mid \mathrm{x}_{1} \mathrm{y}_{1} \in \mathrm{E}_{1}, \mathrm{x}_{2} \neq \mathrm{y}_{2}\right\}$ and E is defined in $\mathrm{G}_{1}{ }^{*} \times \mathrm{G}_{2}{ }^{*}$. Note that $\mathrm{G}_{1}{ }^{*}\left[\mathrm{G}_{2}{ }^{*}\right] \neq \mathrm{G}_{2}{ }^{*}\left[\mathrm{G}_{1}{ }^{*}\right]$.
Definition 2.4: The union of two simple graphs $G_{1}{ }^{*}=\left(V_{1}, E_{1}\right)$ and $G_{2}{ }^{*}=\left(V_{2}, E_{2}\right)$ is the simple graph with the vertex set $V_{1}$ $U V_{2}$ and edge set $\mathrm{E}_{1} \cup \mathrm{E}_{2}$. The union of $\mathrm{G}_{1}{ }^{*}$ and $\mathrm{G}_{2}{ }^{*}$ is denoted by $\mathrm{G}^{*}=\mathrm{G}_{1} \cup \mathrm{G}_{2}=\left(\mathrm{V}_{1} \cup \mathrm{~V}_{2}, \mathrm{E}_{1} \cup \mathrm{E}_{2}\right)$.
Definition 2.5: The join of two simple graphs $\mathrm{G}_{1}{ }^{*}=\left(\mathrm{V}_{1}, \mathrm{E}_{1}\right)$ and $\mathrm{G}_{2}{ }^{*}=\left(\mathrm{V}_{2}, \mathrm{E}_{2}\right)$ is the simple graph with the vertex set $\mathrm{V}_{1} \cup \mathrm{~V}_{2}$ and edge set $E_{1} \cup E_{2} \cup E^{\prime}$, where $E^{\prime}$ is the set of all edges joining the nodes of $V_{1}$ and $V_{2}$ and assume that $V_{1} \cap V_{2} \neq \varnothing$,. The join of $G_{1}$ and $G_{2}$ is denoted by $\left.G=G_{1}\right) G_{2}=\left(V_{1} \cup V_{2}, E_{1} \cup E_{2} \cup E^{\prime}\right)$.

Definition 2.6: An isomorphism of the graphs $\mathrm{G}_{1}{ }^{*}$ and $\mathrm{G}_{2}{ }^{*}$ is a bijection between the vertex sets of $\mathrm{G}_{1}{ }^{*}$ and $\mathrm{G}_{2}{ }^{*}$ such that any two vertices $v_{1}$ and $v_{2}$ of $G_{1}{ }^{*}$ are adjacent in $G_{1}{ }^{*}$ if and only if $f\left(v_{1}\right)$ and $f\left(v_{2}\right)$ are adjacent in $G_{2}{ }^{*}$. If an isomorphism exists between two graphs, then the graphs are called isomorphic and we write $\mathrm{G}_{1}{ }^{*} \approx \mathrm{G}_{2}{ }^{*}$. An automorphism of a graph is a graph isomorphism with itself, i.e., a mapping from the vertices of the
given graph $G^{*}$ back to vertices of $G^{*}$ such that the resulting graph $\mathrm{G}^{*}$ is isomorphic with $\mathrm{G}^{*}$.
Definition 2.7: The complementary graph $\bar{G}^{*}$ of a simple graph has the same vertices as $\mathrm{G}^{*}$. Two vertices are adjacent in $\bar{G}^{*}$ if and only if they are not adjacent in $\mathrm{G}^{*}$.
Definition 2.8: A fuzzy subset $\mu$ on a set X is a map $\mu: \mathrm{X} \rightarrow$ $[0,1]$. A map $v: X \times X \rightarrow[0,1]$ is called a fuzzy relation on $X$ if
 symmetric if $v(x, y)=v(y, x)$ for all $x, y \in X$.
Definition 2.9: Let $X$ be a nonempty set. A TPF set $B$ in $X$ is an object having the form
$B=\left\{\left(x, \mu^{P}(x), \mu^{N}(x), \mu^{\square}(x)\right) \mid x \in X / \mu^{\square}(x)=\mu^{P}(x)+\mu^{N}(x)\right.$, where $\square$ is P or N$\}$,
where $\mu^{\mathrm{P}}: \mathrm{X} \rightarrow[0,1]$ and $\mu^{\mathrm{N}}: \mathrm{X} \rightarrow[-1,0]$ and $\mu^{\square}: \mathrm{X} \rightarrow[-1,1]$ are mappings.
We use the positive membership degree $\mu^{\mathrm{P}}(\mathrm{x})$ to denote the satisfaction degree of an element $x$ to the property corresponding to a Tripolar fuzzy set B , and the negative membership degree $\mu^{\mathrm{N}}(\mathrm{x})$ to denote the satisfaction degree of an element x to some implicit counter-property corresponding to a Tripolar fuzzy set B and the positive or negative degree $\mu$ (x) to denote the satisfaction degree of an element $x$ to some properties corresponding to a Tripolar fuzzy set B.If $\mu^{\mathrm{P}}(\mathrm{x}) \neq 0$ and $\mu^{N}(x)=0$ and $\mu^{\square}(x)=0$, it is the situation that x is regarded as having only positive satisfaction for B. If $\mu^{P}(x)=0$ and $\mu^{N}(x)$ $\neq 0$ and $\mu(x)=0$, it is the situation that $x$ does not satisfy the property of $B$ but somewhat satisfies the counter properties of B. If $\mu^{P}(x)=0$ and $\mu^{N}(x)=0$ and $\mu^{\square}(x) \neq 0$, it is the situation that $x$ is satisfy the some properties of $B$.
It is possible for an element x to be such that $\mu^{\mathrm{P}}(\mathrm{x}) \neq 0$ and $\mu^{\mathrm{N}}(\mathrm{x}) \neq 0$ and $\mu(\mathrm{x}) \neq 0$, when the membership function of the property overlaps that of its counter property over some portion of X . For the sake of simplicity, we shall use the symbol $\mathrm{B}=$ $\left(\mu^{\mathrm{P}}, \mu^{\mathrm{N}}, \mu^{\square}\right)$ for the Tripolar fuzzy set, $\mathrm{B}=\left\{\left(\mathrm{x}, \mu^{\mathrm{P}}(\mathrm{x}), \mu^{\mathrm{N}}(\mathrm{x}), \mu^{\square}\right.\right.$ (x) ) |x $\in X\}$, where $\mu^{\square}(x)=\mu^{P}(x)+\mu^{N}(x)$ and $\square$ is $P$ or $N$.

Definition 2.10: For every two TPF sets $A=\left(\mu_{A}^{P}, \mu_{A}^{N}, \mu^{\square}\right)$ and $\mathrm{B}=\left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}, \mu^{\mathrm{N}}{ }_{\mathrm{B}} \mu^{\square}\right)$ in X, we define

1. $(\mathrm{A} \cap \mathrm{B})(\mathrm{x})=\left(\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x})\right), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{x})\right)\right.$, $\left.\operatorname{minmax}\left(\mu^{P}{ }_{A}(x), \mu^{N}{ }_{B}(x)\right)\right)$.
2. $(A \cup B)(x)=\left(\max \left(\mu^{P}{ }_{A}(x), \mu^{P}{ }_{B}(x)\right), \min \left(\mu^{N}{ }_{A}(x), \mu^{N}{ }_{B}(x)\right)\right.$, $\operatorname{maxmin}\left(\mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x})\right)$ ).

Definition 2.11: Let $\mathrm{A}=\left(\mu^{\mathrm{P}}{ }_{\mathrm{A}}, \mu^{\mathrm{N}}{ }_{\mathrm{A}}, \mu_{\mathrm{A}}{ }_{\mathrm{A}}\right)$ and $\mathrm{B}=\left(\mu_{\mathrm{B}}{ }_{\mathrm{B}}, \mu^{\mathrm{N}}{ }_{\mathrm{B}}, \mu_{\mathrm{B}}{ }_{\mathrm{B}}\right)$ be Tripolar fuzzy sets on a set X.
If $A=\left(\mu^{P}{ }_{A}, \mu^{N}{ }_{A}, \mu^{\square}\right)$ is a TPF relation on a set $X$, then $A=\left(\mu^{P}{ }_{A}\right.$ ,$\mu_{\mathrm{N}, \mu_{\mathrm{P}}}^{\square_{B}}$ ) is called a TPF relation on
$B=\left(\mu_{B}^{P}, \mu^{\mathrm{N}}{ }_{\mathrm{B}} \mu^{\square}{ }_{\mathrm{B}}\right)$ if
$\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{x}, \mathrm{y}) \leq \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{y})\right)$ and
$\mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}, \mathrm{y}) \geq \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{y})\right.$ )and
$\mu_{A}(x, y) \quad \operatorname{minmax}\left(\mu^{P}{ }_{B}(x), \mu^{N}{ }_{B}(y)\right)-\cdots----(3)$ for all $x, y \in X$.
\{Since, $\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\underline{x}, y)$ and $\mu^{\mathrm{N}} \mathrm{A}_{\mathrm{A}}(\mathrm{x}, \mathrm{y})$ is Zero.
From (1) and (2) We have,
$\Rightarrow \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{y})\right) \geq 0 \geq \max \left(\mu^{\mathrm{N}} \mathrm{B}_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{N}} \mathrm{B}_{\mathrm{B}}(\mathrm{y})\right)$,
$\Rightarrow \mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{y}) \geq \operatorname{minmax}\left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{y})\right) \geq \mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x})$,
$\Rightarrow \mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{y}), \mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}) \geq \operatorname{minmax}\left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{y})\right)$,
$\left.\Rightarrow \mu_{\mathrm{A}}(\mathrm{x}, \mathrm{y}) \quad \operatorname{minmax}\left(\underline{\mu}_{\mathrm{B}}{ }_{\mathrm{B}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{y})\right)-\cdots-{ }^{2}(3)\right\}$
A Tripolar fuzzy relation $A$ on $X$ is called symmetric if
$\mu_{{ }_{\mathrm{N}}}^{\mathrm{P}}(\mathrm{x}, \mathrm{y})=\mu_{\mathrm{A}}^{\mathrm{P}}(\mathrm{y}, \mathrm{x})$ and
$\mu^{N}{ }_{A}(x, y) \gtrless \mu^{\mathrm{N}}(\mathrm{y}, \mathrm{x})$ andfor all $\mathrm{x}, \mathrm{y}$ X.
Throughout this paper, $\mathrm{G}^{*}$ will be a crisp graph, and G a TPFG.

## 3.Tripolar Fuzzy Graphs

Definition 3.1. A TPFG with a underlying set V is defined to be a pair $G=(A, B)$ where $A=\left(\mu^{P}{ }_{A}, \mu^{N_{A}}, \mu^{\square}\right)$ is a TPF set in $V$ and $\mathrm{B}=\left(\mu^{\mathrm{P}}{ }_{\mathrm{B}}, \mu^{\mathrm{N}}{ }_{\mathrm{B}}, \mu^{\square}{ }_{\mathrm{B}}\right)$ is a TPF set in $\mathrm{E} \subseteq \mathrm{V} \times \mathrm{V}$ such that
$\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\{\mathrm{x}, \mathrm{y}\}) \leq \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}{ }^{\mathrm{P}}(\mathrm{y})\right)$ and $\mu^{\mathrm{N}}{ }_{\mathrm{B}}(\{\mathrm{x}, \mathrm{y}\}) \geq \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A}}\right.$ (x), $\left.\mu_{\mathrm{A}}^{\mathrm{N}}(\mathrm{y})\right)$
$\mu^{\square}{ }_{B}(\{x, y\}) \quad \operatorname{minmax}\left(\mu^{P}{ }_{A}(x), \mu^{N}{ }_{A}(y)\right)$ for all $\{x, y\} \in E$.
We call $A \stackrel{\rightharpoonup}{\text { the TPF vertex set of V, B the TPFedge set of E, }}$ respectively. Note that B is a symmetric TPFrelation on A . We use the notation xy for an element of E . Thus, $\mathrm{G}=(\mathrm{A}, \mathrm{B})$ is a TPFG of $\mathrm{G}^{*}=(\mathrm{V}, \mathrm{E})$ if
$\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{xy}) \leq \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{y})\right)$ and
$\mu^{\mathrm{N}} \mathrm{B}(\mathrm{xy}) \geq \max \left(\mu_{\mathrm{A}}^{\mathrm{N}}(\mathrm{x}), \mu_{\mathrm{A}}^{\mathrm{N}}(\mathrm{y})\right)$ and
$\mu^{\square}{ }_{B}(x y) \geqslant \operatorname{minmax}\left(\mu_{B}^{P}(x), \mu_{B}^{N}(y)\right)$ for all $x y \epsilon E$.
Example 3.1:Suppose a graph $G^{*}=(V, E)$ such that $\mathrm{V}=\{\mathrm{x}, \mathrm{y}, \mathrm{z}\}, \mathrm{E}=\left\{\mathrm{xy}, \mathrm{yz}, \mathrm{zx}\right.$. Let $\mathrm{A}=\left(\mu_{\mathrm{A}}^{\mathrm{P}}, \mu^{\mathrm{N}}{ }_{\mathrm{A}}, \mu_{\mathrm{A}}^{\square}\right)$ be a TPF subset of $V$ and let $B=\left(\mu^{P}{ }_{B}, \mu_{B}{ }_{B}, \mu_{B}\right)$ be a TPF subset of $E \subseteq V x V$ defined by

|  | x | y | z |
| :---: | :---: | :---: | :---: |
| $\mu^{\mathrm{P}}{ }_{\mathrm{A}}$ | 0.6 | 0.3 | 0.5 |
| $\mu_{\mathrm{A}}^{\mathrm{N}}$ | -0.4 | -0.6 | -0.7 |
| $\mu_{\mathrm{A}}$ | 0.2 | -0.3 | -0.2 |

|  | xy | yz | zx |
| :---: | :---: | :---: | :---: |
| $\mu^{\mathrm{P}}{ }_{\text {A }}$ | 0.2 | 0.20 .3 |  |
| $\mu^{\mathrm{N}}$ A | -0.3 | -0.4 - |  |
|  | 0.2 |  |  |
| $\mu_{\text {A }}$ | -0.1 | - 0.2 |  |
|  | 0.1 |  |  |

Definition 3.2 Let $A_{1}=\left(\mu^{P}{ }_{A 1}, \mu^{N}{ }_{A 1}, \mu^{\square}{ }_{A 1}\right)$ and $A_{2}=\left(\mu^{P}{ }_{A 2}, \mu^{N}{ }_{A 2}, \mu^{\square}{ }_{A 2}\right)$ be Tripolar fuzzy subsets of $V_{1}$ and $V_{2}$ and let $B_{1}=($ $\left.\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}, \mu^{\mathrm{N}}{ }_{\mathrm{B} 1}, \mu^{\square}{ }_{\mathrm{B} 1}\right)$ and $\mathrm{B}_{2}=\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 2}, \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}, \mu^{\square}{ }_{B 2}\right)$ be Tripolar fuzzy subsets of $\mathrm{E}_{1}$ and $E_{2}$, respectively. Then, we denote the Cartesian product of two Tripolar fuzzy graphs $G_{1}$ and $G_{2}$ of the graphs $G_{1}$ and $G_{2}$ by $G_{1} \times G_{2}\left(A_{1} \times A_{2}, B_{1} \times B_{2}\right)$, and define as follows:

```
(i) \(\left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1} \times \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\right)\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)=\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right), \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{x}_{2}\right)\right)\)
    \(\left(\mu^{\mathrm{N}} \mathrm{Al} \times \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\right)\left(\mathrm{x}_{1}, \mathrm{X}_{2}\right) \quad=\max \left(\mu_{\mathrm{A} 1}^{\mathrm{N}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A} 2}^{\mathrm{N}}\left(\mathrm{x}_{2}\right)\right)\)
    \(\left(\mu_{\mathrm{P}}{ }_{\mathrm{A} 1} \times \mu_{\mathrm{A}}\right)\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)=\operatorname{minmax}\left(\mu_{\mathrm{A} 1}\left(\mathrm{x}_{\mathrm{p}}\right), \mu_{\mathrm{A} 2}\left(\mathrm{x}_{2}\right)\right)\) for all \(\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right) \boldsymbol{\epsilon} \mathrm{V}\),
(ii) \(\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right) \quad=\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right)\)
    \(\left(\mu^{\mathrm{N}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)=\max \left(\mu_{\mathrm{A} 1}^{\mathrm{N}}(\mathrm{x}), \mu^{\mathrm{N}} \mathrm{B}_{\mathrm{B} 2}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right)\)
    \(\left(\mu_{B 1} \times \mu_{{ }^{\square}}\right)\left(x, x_{2}\right)\left(x, y_{2}\right)=\operatorname{minmax}\left(\mu_{A 1}(x), \mu_{B_{2}}\left(\mathrm{x}_{2} y_{2}\right)\right)\) for all \(\mathrm{x} \boldsymbol{\epsilon} \mathrm{V} 1\), for all \(\left(\mathrm{x}_{2}, \mathrm{y}_{2},\right) \in \mathrm{E}_{2}\)
(iii) \(\left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1} \times \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\right)\left(\mathrm{x}_{1}, \mathrm{z}\right)\left(\mathrm{y}_{1}, \mathrm{z}\right) \quad=\min \left(\mu^{\mathrm{P}} \mathrm{B}_{\mathrm{B} 1}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}(\mathrm{z})\right)\)
    \(\left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1} \times \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\right)\left(\mathrm{x}_{1}, \mathrm{z}\right)\left(\mathrm{y}_{1}, \mathrm{z}\right)=\max \left(\mu^{\mathrm{N}_{\mathrm{B} 1}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{z})\right)\)
    \(\left(\mu_{\mathrm{B} 1} \times \mu_{\mathrm{B} 2}\right)\left(\mathrm{x}_{1}, \mathrm{z}\right)\left(\mathrm{y}_{1}, \mathrm{z}\right) \quad=\operatorname{minmax}\left(\mu_{\mathrm{B} 1}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mu_{\mathrm{A} 2}(\mathrm{z})\right) \quad\) for all \(\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right) \in \mathrm{E}_{1}\)
```

Proposition 3.1: If $G_{1}$ and $G_{2}$ are the Tripolar fuzzy graphs, then $G_{1} \times G_{2}$ is a Tripolar fuzzy graph.
Proof: Let $\mathrm{x} \boldsymbol{\epsilon} \mathrm{V}_{1}, \mathrm{x}_{2} \mathrm{y}_{2} \in \mathrm{E}_{2}$. Then we have

```
                                    \(\left(\mu_{\mathrm{B} 1}{ }^{\mathrm{P}} \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)=\min \left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1}(\mathrm{x}), \mu_{\mathrm{B}}{ }^{\mathrm{P}}{ }_{2}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right.\)
                                \(\leq \min \left(\mu^{\mathrm{P}} \mathrm{A}_{1}(\mathrm{x}), \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{x}_{2}\right), \mu^{\mathrm{P}}{ }_{{ }_{2} 2}\left(\mathrm{y}_{2}\right)\right)\right.\)
    \(=\min \left(\min \left(\mu_{A}{ }^{P}{ }_{1}(x), \mu^{P}{ }_{A 2}\left(x_{2}\right)\right), \min \left(\mu_{A}{ }^{P}{ }_{1}(x), \mu_{A}{ }^{P}{ }_{2}\left(y_{2}\right)\right)\right)\)
    \(=\min \left(\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \times \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1}\right)\left(\mathrm{x}, \mathrm{x}_{2}\right),\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \times \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)\)
\(\left(\mu^{\mathrm{N}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)=\max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right.\)
    \(\geq \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}(\mathrm{x}), \max \left(\mu^{\mathrm{N}} \mathrm{A}_{2}\left(\mathrm{x}_{2}\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{y}_{2}\right)\right)\right)\)
    \(=\max \left(\max \left(\mu^{\mathrm{N}} \mathrm{A}_{1}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{x}_{2}\right)\right), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{y}_{2}\right)\right)\right)\)
    \(\left.=\max \left(\left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1} \times \mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\right)\left(\mathrm{x}, \mathrm{x}_{2}\right),\left(\mu^{\mathrm{N}}{ }_{\mathrm{Al}} \times \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{1}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)\right)\)
    \(\left(\mu_{\mathrm{B} 1} \times \mu_{{ }_{\mathrm{B}} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right) \quad=\operatorname{minmax}\left(\left(\mu_{\mathrm{A}} \square_{1}(\mathrm{x}), \mu_{\mathrm{B}}{ }_{2}{ }_{2}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right)\right.\)
    \(\geq \operatorname{minmax}\left(\mu_{\mathrm{A} 1}(\mathrm{x}), \operatorname{minmax}\left(\mu_{\mathrm{A} 2}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{A}_{2}}\left(\mathrm{y}_{2}\right)\right)\right)\)
```

```
    \(=\operatorname{minmax}\left(\left(\mu_{\mathrm{A}}{ }_{1} \times \mu_{\mathrm{A}}{ }_{1}\right)\left(\mathrm{x}, \mathrm{x}_{2}\right),\left(\mu_{\mathrm{A}}{ }_{1} \times \mu_{\mathrm{A}}{ }^{\square}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)\)
        Let \(\mathrm{z} \in \mathrm{V}_{2}, \mathrm{x}_{1} \mathrm{y}_{1} \in \mathrm{E}_{1}\). Then, we have
    \(\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}_{1}, \mathrm{z}\right)\left(\mathrm{y}_{1}, \mathrm{z}\right)\right) \quad=\min \left(\mu_{\mathrm{B}}{ }^{\mathrm{P}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right), \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{2}(\mathrm{z})\right)\)

Example 3.4 Consider the TPFG.

Fig:3.2: $\mathrm{G}_{1}$ is Tripolar fuzzy graph
Fig:3.3: $\mathrm{G}_{2}$ is Tripolar fuzzy graph

Fig:3.4

Proposition 3.3. If $\mathrm{G}_{1}$ and $\mathrm{G}_{2}$ are TPFG, then $\mathrm{G}_{1} \cup \mathrm{G}_{2}$ is a TPFG.
Proof. Let xy $\epsilon \mathrm{E}_{1} \cap \mathrm{E}_{2}$. Then
$\left(\mu_{\mathrm{B}}{ }^{\mathrm{P}} \mathrm{U} \cup \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy})=\max \left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}(\mathrm{xy}), \mu_{\mathrm{B}}{ }^{\mathrm{P}}{ }_{2}(\mathrm{xy})\right)$
$\leq \max \left(\min \left(\mu^{P_{A 1}}(x), \mu_{A^{P}}{ }^{\mathrm{P}}(\mathrm{y})\right), \min \left(\mu^{\left.\left.{ }^{\mathrm{P}}{ }_{\mathrm{A} 2}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right), ~}\right.\right.$
$=\min \left(\max \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{A}_{2}}(\mathrm{x}), \max \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{y}), \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right)\right.$
$=\min \left(\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}} \mathrm{V}^{\mathrm{U}} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{2}\right)(\mathrm{y})\right)\right.$
$\left(\mu^{\mathrm{N}}{ }_{\mathrm{B} 1} \cup \mu_{\mathrm{B} 2} \mathrm{~N}_{\mathrm{B}}\right)(\mathrm{xy})=\min \left(\mu_{\mathrm{N}} \mathrm{N}_{\mathrm{B}}(\mathrm{xy}), \mu_{\mathrm{B}}{ }^{\mathrm{N}} 2(\mathrm{xy})\right)$
$\geq \min \left(\max \left(\mu_{\mathrm{A}}{ }^{\mathrm{N}} 1(\mathrm{x}), \mu_{\mathrm{A}}{ }^{\mathrm{N}} 1(\mathrm{y}), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right)\right.$
$=\max \left(\min \left(\mu^{\mathrm{N}}{ }_{1}(\mathrm{x}), \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{x}), \min \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}(\mathrm{y}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right)\right.$
$=\max \left(\left(\mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{N}} 2\right)(\mathrm{y})\right)\right.$
$\left(\mu_{\mathrm{B}}{ }_{1} \mathrm{U}^{\mathrm{U}} \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy})=\operatorname{maxmin}\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}(\mathrm{xy}), \mu_{\mathrm{B}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{xy})\right)$
$=\operatorname{maxmin}\left(\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{x}), \mu_{\mathrm{A}}{ }^{\mathrm{P}}(\mathrm{y}(\mathrm{y})), \max \left(\mu^{\mathrm{N}} \mathrm{A}_{2}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right)\right.$
$=\operatorname{maxmin}\left(\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{x}), \min \left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1}(\mathrm{y}), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{x}), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right.\right.\right.\right.$
$=\operatorname{maxmin}\left(\min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{x}), \max \left(\mu^{\mathrm{N}} \mathrm{A}_{2}(\mathrm{x}), \min \left(\mu_{\mathrm{A}}{ }^{\mathrm{P}} 1{ }_{1}(\mathrm{y}), \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{y})\right)\right.\right.\right.\right.$
$\left.=\operatorname{minmax}\left(\operatorname{maxmin}\left(\mu^{\mathrm{P}} \mathrm{A}_{1}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}(\mathrm{x})\right), \operatorname{maxmin}\left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\right) \mu^{\mathrm{N}}{ }_{\mathrm{A}_{2}}(\mathrm{y})\right)\right)$
$=\operatorname{minmax}\left(\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \cup \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \cup \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}\right)(\mathrm{y})\right)\right.$
Similarly, we can show that if $x y E_{1} \cap E_{2}$, then-

$$
\begin{aligned}
& \leq \min \left(\left(\mu_{\mathrm{A}}{ }_{1} \mathrm{U}^{\mathrm{U}} \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{P}}{ }_{2}\right)(\mathrm{y})\right)\right. \\
& \geq \max \left(\left(\mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{1} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }^{2}\right)(\mathrm{y})\right)\right. \\
& \operatorname{minmax}\left(\left(\mu_{\mathrm{A}}{ }_{1}^{\mathrm{P}} \mathrm{U}^{\mathrm{U}} \mu_{\mathrm{A}}{ }^{\mathrm{N}}{ }_{2}(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }_{1}^{\mathrm{P}} \mathrm{U} \mu_{\mathrm{A}}{ }^{\mathrm{N}} 2\right)(\mathrm{y})\right)\right.
\end{aligned}
$$

If $x y E_{1} \cap E_{2}$, then
$\left(\mu_{\mathrm{B}}{ }^{\mathrm{P}} \mathrm{U} \cup \mu_{\mathrm{B}}^{\mathrm{P}}\right)(\mathrm{xy})$

```
    \geqslant}\operatorname{minmax(( }\mp@subsup{\mu}{\textrm{A}}{}\mp@subsup{}{}{\textrm{P}}\mp@subsup{}{1}{}\cup\mp@subsup{U}{\textrm{A}}{
```

```
    \geqslant}\operatorname{minmax(( }\mp@subsup{\mu}{\textrm{A}}{}\mp@subsup{}{}{\textrm{P}}\mp@subsup{}{1}{}\cup\mp@subsup{U}{\textrm{A}}{
```

$\left(\mu^{\mathrm{N}}{ }_{\mathrm{B} 1} \cup \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy})$
$\left(\mu_{\mathrm{B}}{ }^{\mathrm{P}} \mathrm{U} \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy})$
This completes the proof.
Proposition 3.4. Let $\left\{\mathrm{G}_{\mathrm{i}}: \mathrm{i} \in \mathrm{A}\right\}$ be a family of Tripolar fuzzy graph with the underlying set V . Then $\cap \mu_{\mathrm{B}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{xy})$ $\left.=\operatorname{minmax}\left(\cap \mu_{\mathrm{B}}^{\mathrm{P}+\mathrm{N}}(\mathrm{x}), \cap \mu^{\mathrm{P}+\mathrm{N}_{\mathrm{B}}}\right)(\mathrm{y})\right)$ is a Tripolar fuzzy graph.

Proof. For any x , $\mathrm{y} \boldsymbol{\in} \mathrm{V}$, we have
Consider, $\cap \mu_{\mathrm{B}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{xy})$

```
\(=\left\{\cap \mu_{\mathrm{B}}{ }^{\mathrm{P}} . \cap \mu_{\mathrm{B}}{ }^{\mathrm{N}}\right\}(\mathrm{xy})\)
                        \(=\left\{\cap \mu_{\mathrm{B}}{ }^{\mathrm{P}}(\mathrm{xy}) \cdot \cap \mu_{\mathrm{B}}{ }^{\mathrm{N}}(\mathrm{xy})\right\}\)
                        \(=\inf \mu_{\mathrm{B}}{ }^{\mathrm{P}}(\mathrm{xy}) . \sup \mu_{\mathrm{B}}{ }^{\mathrm{N}}(\mathrm{xy})\)
i \(\in A \quad \quad \stackrel{i}{ } \quad \stackrel{A}{=} \inf \min \left\{\mu_{A i}{ }^{\mathrm{P}}(\mathrm{x}), \mu_{\mathrm{Ai}}{ }^{\mathrm{P}}(\mathrm{y})\right\} \quad . \sup \max \left\{\mu_{\mathrm{Ai}}{ }^{\mathrm{N}}(\mathrm{x}), \mu_{\mathrm{Ai}}{ }^{\mathrm{N}}(\mathrm{y})\right\}\)
i \(\in A \quad=\min \left\{\inf \mu_{A^{\mathrm{P}}}{ }^{\mathrm{P}}(\mathrm{x}), \operatorname{ifff} \mu_{\mathrm{Ai}^{\mathrm{P}}}(\mathrm{y})\right\} \cdot \max \left\{\sup \mu_{\mathrm{Ai}}{ }^{\mathrm{N}}(\mathrm{x}), \sup \mu_{\mathrm{Ai}^{N}}{ }^{\mathrm{N}}(\mathrm{y})\right\}\)
```

```
    i \(\in A \quad=\min \operatorname{if} \operatorname{Inf} \mu_{A i}{ }^{P}(x) \max { }^{i \notin A} \sup \mu_{A i}{ }^{N}(x), \min i f n f \mu_{A i}{ }^{P}(y) . \max \sup \mu_{A i}{ }^{N}(y)\)
```

```
            \({ }_{i \in A}=\operatorname{minmax}\left\{\inf \mu_{A_{i}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{x})\right.\), \(\left.\operatorname{sifp} \mu_{\mathrm{Ai}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{y})\right\}\)
            \({ }_{i \in A}=\operatorname{minmax}\left\{\cap \mu_{\mathrm{Ai}}^{\mathrm{i} \in \mathrm{AP}+\mathrm{N}}(\mathrm{x}), \cap \mu_{\mathrm{Ai}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{y})\right\}\)
                or
                        \(=\operatorname{minmax}\left\{\cap \mu_{\mathrm{Ai}}{ }^{\mathrm{P}+\mathrm{N}}(\mathrm{x}, \mathrm{y})\right\}\)
```

Then $\cap G_{i}$ is a Tripolar Fuzzy graph.
 $\mathrm{A}_{2}=\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 2}, \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}, \mu_{\mathrm{B} 2}\right)$ be TPF subsets of $\mathrm{E}_{1}$ and $\mathrm{E}_{2}$ respectively. Then, we denote the join of two TPFG $\mathrm{G}_{1}^{*}$ and $\mathrm{G}_{2}^{*}$ of the graphs $\mathrm{G}_{1}$ and $G_{2}$ by $G_{1}+G_{2}=\left(A_{1}+A_{2}, B_{1}+B_{2}\right)$ and define as follows:
(i) $\quad\left(\mu^{\mathrm{P}}{ }_{\mathrm{Al}}+\mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\right)(\mathrm{x}) \quad=\left(\mu_{\mathrm{A}_{1}}^{\mathrm{P}} \mathrm{U}^{\mathrm{P}}{ }_{\mathrm{A} 2}\right)(\mathrm{x})$,

$$
\left.\left(\mu^{N}{ }_{A 1}+\mu^{N}{ }_{A 2}\right)(x)=\left(\mu^{N}\right) \mu_{A 1} \cap \mu_{A 2}^{N}\right)(x),
$$

$$
\left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}+\mu^{\mathrm{N}} \mathrm{~A}_{\mathrm{P}}\right)(\mathrm{x})=\left(\mu_{\mathrm{P}}^{\mathrm{P}} \mathrm{P}_{1} \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\right)(\mathrm{x}) \text { if } x \boldsymbol{\epsilon} \mathrm{~V}_{1} \cap V_{2}
$$

(ii) $\quad\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}+\mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy}) \quad=\left(\mu_{\mathrm{B} 1}^{\mathrm{P}} U \mu^{\mathrm{P}}{ }_{{ }_{2} 2}\right)(\mathrm{xy})$,
$\left(\mu_{\mathrm{p} 1}^{\mathrm{N}}+\mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy}) \quad=\left(\mu^{\mathrm{N}} \mathrm{N}_{\mathrm{B} 1} \cap \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy})$
$\left(\mu^{P}{ }_{B 1}+\mu^{N}{ }_{B 2}\right)(x y)=\left(\mu_{B 1}^{P} U \mu^{N}{ }_{B 2}\right)(x y)$, if $x y \in E_{1} \cap E_{2}$
(iii)

If $x y \in E^{\prime}$, where $E^{\prime}$ is the set of all edges joining the nodes of $V_{1}$ and $V_{2}$
Proposition 3.5. If $G_{1}$ and $G_{2}$ are the Tripolar fuzzy graphs, then $G_{1}+G_{2}$ is a TPFG.
Proof: Let $x y \in E^{\prime}$. Then
$\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}+\mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)(\mathrm{xy}) \quad=\operatorname{maxmin}\left(\mu^{\mathrm{P}} \mathrm{A}_{1}(\mathrm{x}), \mu_{\mathrm{P}}^{\mathrm{N}} \mathrm{A}_{\mathrm{A} 2}(\mathrm{y})\right)$

Let $x y \in E_{1} \cup E_{2}$. Then the result follows from Proposition3.3.Thiscompletes the proof.
Proposition 3.6: Prove that $\left(\mu^{P+N}{ }_{B 1}\right)(x y)=\operatorname{minmax}\left(\left(\mu^{P+N}{ }_{A 1}\right)(x, y)\right)$ is aTPFG.
Proof: Let $x y \in E^{\prime}$. Then

$$
\begin{aligned}
& \left(\mu^{\mathrm{P}+\mathrm{N}_{\mathrm{B}}}\right)(\mathrm{xy}) \quad=\left(\mu_{\mathrm{P} 1}^{\mathrm{P}} \cdot \mu^{\mathrm{N}}{ }_{\mathrm{BI}}\right)(\mathrm{xy}) \\

\end{aligned}
$$

$$
=\operatorname{minmax}\left(\left(\mu_{\mathrm{P}+\mathrm{N}}^{\mathrm{P}+\mathrm{N}}\right)(\mathrm{x}, \mathrm{y})\right)
$$

## 4. Strong Tripolar fuzzy graphs

Definition 4.1. A Tripolar fuzzy graph $G=(A, B)$ is called strong if $\mu_{B}^{P}(x y)=\min \left(\mu^{P}{ }_{A}(x), \mu_{A}{ }^{\mathrm{P}}(y)\right)$ and $\mu^{N}{ }_{B}(x y)=\max \left(\mu^{N}{ }_{A}(x), \mu^{N_{A}}\right.$ (y)) and $\mu_{B}(x y)=\operatorname{minmax}\left(\mu_{A}(x), \mu_{A}(y)\right)$ for all $x y \epsilon E$.

|  | x | y | z |
| :--- | :---: | :--- | :--- |
| $\mu^{\mathrm{P}}{ }_{\mathrm{A}}$ | 0.8 | 0.4 | 0.5 |
| $\mu_{\mathrm{A}}$ | -0.4 | -0.7 | -0.3 |
| $\mu_{\mathrm{A}}$ | 0.4 | 0.3 | 0.2 |

Example 4.1 Consider a graph G* s ${ }^{7} \mathrm{G}$ subset of V and letB be a TPF subset of
E defined by

|  | xy | yz | zx |
| :--- | :---: | :---: | :---: |
| $\mu_{\mathrm{A}}^{\mathrm{P}}$ | 0.4 | 0.3 | 0.5 |
| $\mu_{\mathrm{A}}$ | -0.3 | -0.1 | -0.2 |
| $\mu_{\mathrm{A}}$ | -0.1 | 0.2 | 0.1 |

Proposition 4.1 If $G_{1}$ and $G_{2}$ are the strong TPFG, then $G_{1} G_{2}, G_{1}\left[G_{2}\right]$ and $G_{1}+G_{2}$ are STPFG.
Proof. The proof follows from Propositions 3.1, 3.2 and 3.5

## Remark.

1. The union of two strong TPFG is not necessary a strong TPFG
2. If $G_{1} \times G_{2}$ is strong TPFG, then at least $G_{1}$ or $G_{2}$ must be strong.

$$
\mu^{\mathrm{P}} \mathrm{P}_{\mathrm{B} 1}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right)<\min \left\{\mu^{\mathrm{P}} \mathrm{~A}_{1}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{A} 1}(\mathrm{y})\right\}, \quad \mu_{\mathrm{B} 2}^{\mathrm{P}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right)<\min \left\{\mu^{\mathrm{P}}{ }_{\mathrm{A} 2}(\mathrm{x}), \mu_{\mathrm{A}_{2} 2}^{\mathrm{P}}(\mathrm{y})\right\},
$$

$\mu^{\mathrm{N}} \mathrm{N}_{11}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right)>\max \left\{\mu^{\mathrm{N}} \mathrm{Al}_{1}(\mathrm{x}), \mu^{\mathrm{N}} \mathrm{A}_{1}(\mathrm{y})\right\}, \mu^{\mathrm{N}_{B 2}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right)>\max \left\{\mu^{\mathrm{N}} \mathrm{A}_{2}(\mathrm{x}), \mu^{\mathrm{N}} \mathrm{A}_{2}(\mathrm{y})\right\}$,

Hence
$\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)<\min \left(\left(\mu^{\mathrm{P}} \mathrm{B}_{\mathrm{B}} \times \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\right),\left(\mu_{{ }_{\mathrm{B} 1}}^{\mathrm{P}} \times \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)\right.$
$\left(\mu^{\mathrm{N}}{ }_{\mathrm{B} 1} \times \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)>\max \left(\left(\mu_{\mathrm{B} 1}^{\mathrm{N}} \times \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{x}_{2}\right)\right),\left(\mu_{\mathrm{B} 1}^{\mathrm{N}} \times \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\left(\mathrm{x}, \mathrm{y}_{2}\right)\right)\right.$
$\left(\mu_{\text {B1 }} \times \mu_{\text {B2 }}\right)\left(\left(x, x_{2}\right)\left(x, y_{2}\right)\right) \quad \operatorname{minmax}\left(\left(\mu_{\text {B1 }} \times \mu_{\text {B2 }}\right)\left(\left(x, x_{2}\right)\right),\left(\mu_{\text {B1 }} \times \mu_{\text {B2 }}\right)\left(\left(x, y_{2}\right)\right)\right.$
3.If $G_{1}\left[G_{2}\right]$ is strong TPFG, then at least $G_{1}$ or $G_{2}$ must be strong.

Definition 4.2: A strong Tripolar fuzzy graph $G$ is called self complementary if $\mathrm{G} \approx \mathrm{G}$.
Proposition 4.2: Let $G$ be a self complementary strong Tripolar fuzzy graph. Then
$\Sigma \mu^{{ }^{P}}{ }_{\mathrm{B}}(\mathrm{xy})=\Sigma \min \left(\mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{P}}{ }_{\mathrm{A}}(\mathrm{y})\right)$,
$\mathrm{x} \neq \mathrm{y} \quad \mathrm{x} \neq \mathrm{y}$
$\Sigma \mu^{\mathrm{N}}{ }_{\mathrm{B}}(\mathrm{xy})=\Sigma \max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{N}} \mathrm{A}_{\mathrm{A}}(\mathrm{y})\right)$, $x \neq y \quad x \neq y$
$\Sigma \mu_{\mathrm{B}}(\mathrm{xy})=\Sigma \operatorname{minmax}\left(\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right)$.
$x \neq y \quad x \neq y$
Proof: Let G be a self complementary strong TPFG. Then there exists an automorphism $\mathrm{f}: \mathrm{V} \rightarrow \mathrm{V}$ such that $\mu_{\mathrm{A}}{ }^{\mathrm{P}}(\mathrm{f}(\mathrm{x}))=\mu^{\mathrm{P}}(\mathrm{x})$ and $\mu_{A}{ }^{N}(f(x))=\mu^{N}{ }_{A}(x)$ and $\overline{\mu_{A}}(f(x))=\mu_{A}(x)$ for all $x \in V$ and $\mu_{B}{ }^{P}(f(x) f(y))=\mu_{B}{ }^{P}(x y)$ and $\mu_{B}{ }^{N}(f(x) f(y))=\mu_{B}{ }^{N}(x y)$ and $\mu_{B} \quad(f(x) f(y))$ $=\mu_{\mathrm{B}}(\mathrm{xy})$ for all $\mathrm{x}, \mathrm{y} \epsilon \mathrm{V}$.
By definition of G, we have

$$
\begin{aligned}
& \sum_{x \neq y} \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\mathrm{xy})=\sum_{\mathrm{x} \neq \mathrm{y}} \min \left(\mu^{\mathrm{P}}(\mathrm{x}), \mu_{\mathrm{A}}^{\mathrm{P}}(\mathrm{y})\right), \\
& \mu_{B}{ }^{\mathrm{N}}(\mathrm{f}(\mathrm{x}) \overline{\mathrm{f}}(\mathrm{y}))=\max \left(\mu_{\mathrm{A}}{ }^{\mathrm{N}}\left(\mathrm{f}(\mathrm{x}), \mu_{\mathrm{A}}{ }^{\mathrm{N}}(\mathrm{f}(\mathrm{y}))\right), \mu_{\mathrm{B}}^{\mathrm{N}}(\mathrm{x} y)=\max \left(\mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\mathrm{N}}{ }_{\mathrm{A}}(\mathrm{y})\right),\right. \\
& \sum_{x \neq y} \mu^{N_{B}}(x y)=\sum_{x \neq y} \max \left(\mu^{N_{A}}(x), \mu_{A}{ }^{\mathrm{N}}(\mathrm{y})\right), \\
& \mu_{\mathrm{B}}(\mathrm{f}(\mathrm{x}) \mathrm{f}(\mathrm{y}))=\operatorname{minmax}\left(\mu_{\mathrm{A}}\left(\mathrm{f}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right), \mu_{\mathrm{B}}(\mathrm{x} y)=\operatorname{minmax}\left(\mu^{\square}{ }_{\mathrm{A}}(\mathrm{x}), \mu^{\square}{ }_{\mathrm{A}}(\mathrm{y})\right),\right. \\
& \sum_{x \neq y} \mu_{B}(x y)=\sum_{x \neq y} \operatorname{minmax}\left(\mu_{A}(x), \mu_{A}{ }^{\square}(y)\right),
\end{aligned}
$$

This completes the proof.

## Remark.

1.Let $G$ be a strong TPFG. If $\mu_{B}^{P}(x y)=\min \mu^{P}{ }_{A}(x), \mu_{A}^{P}(y)$ and $\mu^{N_{B}}(x y)=\max \mu_{A}{ }^{N}(x), \mu^{N}{ }_{A}(y)$, and $\mu_{B}{ }_{B}(x y)=\max \mu_{A}{ }^{\square}(x), \mu_{A}{ }_{A}(y)$ for allx, $y \in V$, then $G$ is self complementary.
2.Let $\mathrm{G}_{1}$ and $\mathrm{G}_{2}$ be strong TPFG. Then $\mathrm{G}_{1} \cong \mathrm{G}_{2}$ if and only if $\overline{\mathrm{G}}_{1} \cong \mathrm{G}_{2}$.

## 5. Automorphic Tripolar fuzzy graphs

Definition 5.1:Let $G_{1}$ and $G_{2}$ be the Tripolar fuzzy graphs. A homomorphism $f: G_{1} \rightarrow G_{2}$ is a mapping $f$ : $V_{1} \rightarrow V_{2}$ which satisfies the following conditions:
(a) $\quad \mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right) \leq \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right) \geq \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right)$, $\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right) \geq \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right) \leq \mu_{\mathrm{P}}^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right)$,
(b) $\quad \mu^{\mathrm{P}}{ }_{\mathrm{B} 1}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right) \leq \mu_{\text {B2 }}^{\mathrm{P}}\left(\mathrm{f}\left(\mathrm{x}_{1}\right) \mathrm{f}\left(\mathrm{y}_{1}\right)\right), \mu^{\mathrm{N}}{ }_{\mathrm{B} 1}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right) \geq \mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right) \mathrm{f}\left(\mathrm{y}_{1}\right)\right)$,
$\mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right) \geq \mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right) \mathrm{f}\left(\mathrm{y}_{1}\right)\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right) \leq \mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{f}\left(\mathrm{x}_{1}\right) \mathrm{f}\left(\mathrm{y}_{1}\right)\right)$, for all $\mathrm{x}_{1} \in \mathrm{~V}_{1}, \mathrm{x}_{1} \mathrm{y}_{1} \in \mathrm{E}_{1}$.
Definition 5.2. Let $G_{1}$ and $G_{2}$ be TPFG. An isomorphism $f: G_{1} \rightarrow G_{2}$ is a bijective mapping $f: V_{1} \rightarrow V_{2}$ which satisfies the following conditions:
(c) $\quad \mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(\mathrm{x}_{1}\right)=\mu_{\mathrm{A}_{2}}^{\mathrm{P}}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right), \mu_{\mathrm{A} 1}^{\mathrm{N}}\left(\mathrm{x}_{1}\right)=\mu_{\mathrm{A} 2}^{\mathrm{N}}\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right),\left(\mu_{\mathrm{A} 1}^{\mathrm{P}}+\mu_{\mathrm{A} 1} \mathrm{~N}_{1}\right)\left(\mathrm{x}_{1}\right)=\left(\mu_{{ }_{A 2}}^{\mathrm{P}}+\mu_{\mathrm{A} 2}^{\mathrm{N}}\right)\left(\mathrm{f}\left(\mathrm{x}_{1}\right)\right)$,
(d) $\quad \mu^{P}{ }_{B 1}\left(x_{1} y_{1}\right)=\mu^{P}{ }_{B 2}\left(f\left(x_{1}\right) f\left(y_{1}\right)\right), \mu^{N}{ }_{B 1}\left(f\left(x_{1}\right) f\left(y_{1}\right)\right)=\mu^{N}{ }_{B 2}\left(f\left(x_{1}\right) f\left(y_{1}\right)\right),\left(\mu_{B 1}{ }^{P}+\mu^{N}{ }_{B 1}\right)\left(f\left(x_{1}\right) f\left(y_{1}\right)\right)=\left(\mu_{B 1}{ }^{P}+\mu_{B 2}\right)\left(f\left(x_{1}\right) f\left(y_{1}\right)\right)$,for all $x_{1} \in V_{1}$, $\mathrm{x}_{1} \mathrm{y}_{1} \in \mathrm{E}_{1}$.
Definition 5.3. Let $G_{1}$ and $G_{2}$ be TPFG. Then, a weak isomorphism $f: G_{1} \rightarrow G_{2}$ is a bijective mapping $f: V_{1} \rightarrow V_{2}$ which satisfies the following conditions:
(e) f is homomorphism,

for all $x_{1} \in V_{1}$. Thus, a weak isomorphism preserves the weights of the nodes but not necessarily the weightsof the arcs.
Example 5.3. Consider TPFG $G_{1}$ and $G_{2}$ of $G_{1}$ and $G_{2}$, respectively.
A map $f: V_{1} \rightarrow V_{2}$ defined by $f\left(a_{1}\right)=b_{2}$ and $f\left(b_{1}\right)=a_{2}$. Then we see that:
(g) $\left.\left.\left.\quad \mu^{\mathrm{P}}{ }_{\mathrm{A} 1}\left(a_{1}\right)=\mu^{\mathrm{P}}{ }_{\mathrm{A} 2}\left(\mathrm{~b}_{2}\right)\right), \mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\left(a_{2}\right)=\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\left(\mathrm{~b}_{1}\right)\right),\left(\mu_{\mathrm{A}_{1}}+\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\right)\left(a_{1}\right)=\left(\mu^{\mathrm{P}}{ }_{\mathrm{A} 2}+\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\right)\left(\mathrm{b}_{2}\right)\right)$,
$\left.\left.\left.\mu^{\mathrm{P}} \mathrm{A}_{1}\left(\mathrm{~b}_{1}\right)=\mu_{\mathrm{A} 2}^{\mathrm{P}}\left(a_{2}\right)\right), \mu_{\mathrm{A} 1}^{\mathrm{N}}\left(\mathrm{b}_{2}\right)=\mu_{\mathrm{A} 2}^{\mathrm{N}}\left(a_{1}\right)\right),\left(\mu_{\mathrm{A}^{2}}+\mu^{\mathrm{N}}{ }_{\mathrm{A} 1}\right)\left(\mathrm{b}_{1}\right)=\left(\mu_{\mathrm{P}_{2}}+\mu^{\mathrm{N}}{ }_{\mathrm{A} 2}\right)\left(a_{2}\right)\right)$,
(h) $\quad \mu^{\mathrm{P}}{ }_{\mathrm{B} 1}\left(a_{1} \mathrm{~b}_{1}\right) \neq \mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\left(\mathrm{f}\left(a_{1}\right) \mathrm{f}\left(\mathrm{b}_{1}\right)\right)=\mu^{\mathrm{P}}{ }_{\mathrm{B} 2}\left(a_{2} \mathrm{~b}_{2}\right), \mu^{\mathrm{N}}{ }_{\mathrm{B} 1}\left(\mathrm{f}\left(a_{1}\right) \mathrm{f}\left(\mathrm{b}_{1}\right)\right) \neq \mu^{\mathrm{N}} \mathrm{N}_{\mathrm{B} 2}\left(\mathrm{f}\left(a_{1}\right) \mathrm{f}\left(\mathrm{b}_{1}\right)\right)=\mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\left(a_{2} \mathrm{~b}_{2}\right)$,
$\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}+\mu^{\mathrm{N}}{ }_{\mathrm{B} 1}\right)\left(\mathrm{f}\left(a_{1}\right) \mathrm{f}\left(\mathrm{b}_{1}\right)\right) \neq\left(\mu_{{ }_{B 1}}+\mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(\mathrm{f}\left(a_{2}\right) \mathrm{f}\left(\mathrm{b}_{2}\right)\right)=\left(\mu^{\mathrm{P}}{ }_{\mathrm{B} 1}+\mu^{\mathrm{N}}{ }_{\mathrm{B} 2}\right)\left(a_{2} \mathrm{~b}_{2}\right)$
Hence the map is a weak isomorphism but not isomorphism.
Definition 5.4: A Tripolar fuzzy set $A=\left(\mu^{P}{ }_{A}, \mu^{N}{ }_{A}, \mu^{\square}{ }_{A}(x)\right)$ in a semigroup $S$ is called a Tripolar subsemigroup of $S$ if it satisfies:
$\mu^{P}{ }_{A}(x y) \geq \min \left\{\mu^{P}{ }_{A}(x), \mu^{P}{ }_{A}(y)\right\}, \mu^{N}{ }_{A}(x y) \leq \max \left\{\mu^{N}{ }_{A}(x), \mu^{N}{ }_{A}(y)\right\}, \mu^{\square}{ }_{A}(x y) \quad \operatorname{minmax}\left\{\mu^{\square}{ }_{A}(x), \mu^{\square}{ }_{A}(y)\right\}$,
where $\mu_{A}(x)=\mu^{P}(x)+\mu^{N}(x)$ for all $x, y \in S$ :
 fuzzy subsemigroup of $G$ and satisfies:
$\mu^{P}{ }_{A}\left(x^{-1}\right)=\mu^{P}{ }_{A}(x), \mu^{N}{ }_{A}\left(x^{-1}\right)=\mu_{A}{ }^{N}(x), \mu^{\square}{ }_{A}\left(x^{-1}\right)=\mu^{\square}{ }_{A}(x)$
where $\mu^{\square}\left(x^{-1}\right)=\mu^{P}\left(x^{-1}\right)+\mu^{N}\left(x^{-1}\right)$ for all $x \in G$ :
We now show how to associate a TPF group with a TPFG in a natural way.
Proposition 5.1. Let $G=(A, B)$ be a TPFG and Let $\operatorname{Aut}(G)$ be the set of all Automorphisms of G. Then (Aut(G),) forms a group.
Proof. Let $\phi, \operatorname{Aut}(\mathrm{G})$ and Let $\mathrm{x}, \mathrm{y} \boldsymbol{\epsilon}$. Then
$\mu^{\mathrm{P}}{ }_{\mathrm{B}}\left(\left(\phi^{\circ} \psi\right)(\mathrm{x})(\phi \circ \psi)(\mathrm{y})\right) \quad=\mu_{\mathrm{B}}{ }^{\mathrm{P}}\left((\phi(\psi(\mathrm{x}))(\phi(\psi))(\mathrm{y})) \geq \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\psi(\mathrm{x}) \psi(\mathrm{y})) \geq \mu^{{ }^{\mathrm{P}}}{ }_{\mathrm{B}}(\mathrm{xy})\right.$,
$\mu^{\mathrm{N}}{ }_{\mathrm{B}}\left((\phi \circ \psi)(\mathrm{x})\left(\phi^{\circ} \psi\right)(\mathrm{y})\right) \quad=\mu^{\mathrm{N}}{ }_{\mathrm{B}}((\phi(\psi(\mathrm{x}))(\phi(\psi))(\mathrm{y}))) \leq \mu^{\mathrm{N}_{\mathrm{B}}}(\psi(\mathrm{x}) \psi(\mathrm{y})) \leq \mu_{\mathrm{B}}{ }^{\mathrm{N}}(\mathrm{xy})$,

$\mu^{\mathrm{P}}{ }_{\mathrm{B}}((\phi \circ \psi)(\mathrm{x}))=\mu_{\mathrm{P}_{\mathrm{B}}}^{\mathrm{P}}((\phi(\psi(\mathrm{x})))) \geq \mu^{\mathrm{P}}{ }_{\mathrm{B}}(\psi(\mathrm{x})) \geq \mu_{\mathrm{B}}^{\mathrm{P}}(\mathrm{x})$,
$\mu^{N_{B}}\left(\left(\phi^{\circ} \psi\right)(x)\right)=\mu^{N_{B}}((\phi(\psi(x)))) \leq \mu^{N_{B}}(\psi(x)) \leq \mu^{N_{B}}(x)$.
$\mu_{\text {в }}((\phi \circ \psi)(x)) \quad \underset{\text { в }}{ }((\phi(\psi(x)))) \quad \mu^{\square}(\psi(x)) \quad \mu_{\text {в }}(x)$.
Thus $\phi \circ \psi \boldsymbol{\epsilon A u t ( G ) . ~ C l e a r l y , ~ A u t ( G ) ~ s a t i s f i e s ~ a s s o c i a t i v i t y ~ u n d e r ~ t h e ~ o p e r a t i o n ~} \circ, \phi \circ \mathrm{e}=\phi=\mathrm{e} \circ{ }^{\circ} \phi, \mu_{\mathrm{A}}^{\mathrm{P}}\left(\phi^{-1}\right)=\mu_{A}^{P}(\phi), \mu^{\mathrm{N}}\left(\phi^{-1}\right)=$ $\mu^{N}{ }_{A}(\phi), \mu_{A}\left(\phi^{-1}\right)=\mu_{A}(\phi)$ for all $\phi \in \operatorname{Aut}(G)$. Hence (Aut(G), ${ }^{\square}$ ) forms a group.
Proposition 5.2: Let $G=(A, B)$ be a TPFG and let $\operatorname{Aut}(\mathrm{G})$ be the set of all automorphisms of $G$.
Let $g=\left(\mu^{P}{ }_{g}, \mu^{N}{ }_{g}, \mu_{p}{ }_{\mathrm{g}}\right)$ be a Tripolar fuzzy set in Aut(G) defined by
$\mu^{\mathrm{P}}{ }_{\mathrm{N}}(\phi)=\sup \left\{\mu^{\mathrm{P}}{ }_{\mathrm{B}}(\phi(\mathrm{x}), \phi(\mathrm{y})):(\mathrm{x}, \mathrm{y}) \in \mathrm{V} \times \mathrm{V}\right\}$,
$\mu_{\mathrm{g}}^{\mathrm{N}_{\mathrm{g}}}(\phi) \quad=\inf \left\{\mu_{\mathrm{B}}^{\mathrm{N}}(\phi(\mathrm{x}),(\mathrm{y})):(\mathrm{x}, \mathrm{y}) \in \mathrm{V} \times \mathrm{V}\right\}$,
$\mu^{\square}(\phi) \quad=\mu^{\mathrm{P}}{ }_{\mathrm{g}}(\phi)+\mu_{\mathrm{g}}^{\mathrm{N}_{\mathrm{g}}}(\phi)$ for all $\phi \in \operatorname{Aut}(\mathrm{G})$.
Then $g=\left(\mu_{\mathrm{g}}{ }^{\mathrm{P}}, \mu^{\mathrm{N}}{ }_{\mathrm{g}} \mu_{\mathrm{g}}{ }_{\mathrm{g}}\right)$ is a Tripolar fuzzy group on Aut(G).

## Conclusions

We have introduced the concept of Tripolar fuzzy graphs (TPFG) in this paper. The Tripolar fuzzy models give more precision, flexibility and compatibility to the system as compared to the classical and fuzzy models.
The concept of Tripolar fuzzy graphs can be applied in various areas of engineering, computer science: database theory, expert systems, neural networks, artificial intelligence, signal
processing, pattern recognition, robotics, computer networks, and medical diagnosis.

We plan to extend our research of fuzzification to

- TPFG appliction
- TPFG hypergraphs, intuitionistic fuzzy hypergraphs, ext
- Regular and Irregular TPFG
- Operation on TPFG
- Metric in TPFG
- Balanced Tripolar intutionistc fuzzy graphs
